REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Independent claims 1 and 14 have been amended to include the limitation "an execution stage instruction is inputted to both the high frequency ALU and the low frequency ALU" thus further distinguishing Applicant's invention from the prior art searched and found. The prior art searched and found have taught superscalar machines and machines with variable clock speed, but have not taught that there are multiple execution units executing at different clock speeds with both units executing the same instruction. The prior art searched and found have taught machines with different clock speeds applied universally to all execution units or multiple execution cores with separate clock speeds, but not that one execution unit executes instructions at a slower clock speed (critical path unit) and another execution unit executes instructions at a faster clock speed (non-critical path unit) and the both units execute the same instruction. The prior art searched and found, when teaching multiple execution units with different clock speeds, taught a system that selected a single execution unit to execute the instruction, not executing the instruction in all execution units and then choosing the correct result from all outputs. The superscalar machines have multiple instruction execution units, but all units execute at the same clock speed and, in most cases, there is only one clock speed to the system. The prior art searched and found did not teach have multiple ALUs executing at different clock speeds that executed the same instruction and provided no motivation as to why having multiple ALUs executing at different clock speeds that execute the same instruction would have been beneficial.
